

Pipe Section

The rigid pipe section, ensures the entire flue section is fully insulated

Insulating rigid 316 stainless steel liners within large existing brick stacks have always been a problem

Available in 30mm and 50mm thickness to suit 150mm and 200mm internal diameters. Can be easily trimmed on site to fit 130mm and 180mm internal diameters. Larger sizes available to order. Supplied in one metre sections with self adhesive overlapped tape seam.

Additional 75mm wide foil backed tape can be supplied for the butt jointing of each section and extra security along the flue run. For thatched property installations we recommend the 50mm thick pipe section due to its additional insulation values. Comes foil backed; 30mm/50mm thick. Manufactured from non-combustible rockwool. Can withstand continuous operating temperatures of up to 500°C. Sections have been tested for water absorption to BS2972 1989 Part 12. It is also rot proof, odourless, and does not sustain vermin or encourage the growth of fungi, mould or bacteria.
