

Moisture Meter

Product Features

- Large easy to read LCD display
- Wood selection feature
- High accuracy & fast reaction
- Data hold function
- Low battery indicator
- Temperature compensation
- Auto shut off after 10 minutes
- Supplied with battery and case

HETAS recommends burning wood with a moisture content of 20% or less

This reduces deposits left on the liner or chimney through a clean burning process, reducing the risk of chimney fires

An accurate instrument designed to measure the moisture content of wood fuels, logs, pellets and even paper.

Burning “green or wet” wood is one of the biggest causes of chimney fire, to both brick and metal lined stacks.

To reduce the risk of chimney fires test the dryness of your own fuel supply with a portable moisture meter.
