Flue Enclosure Band & Mesh

Take away the time consuming job of creating an enclosure around twin wall flues within the loft space with our new Flue Enclosure Band & Mesh kit. To meet Building Regulations the flue system must be boxed in, or enclosed within the loft, to avoid combustible materials from being stored, or falling, against the outer skin of the flue.

Simply clamp the Flue Enclosure Band to the twin wall flue, then fix the mesh enclosure to the stand off legs. These legs are pre-set at the manufacturers required stand off distance to combustible materials. To enclose around bends simply cut the mesh at an angle, use a Flue Enclosure Band either side of the bend and it is that easy.

Supplied as single bands,
or a complete kit.

E. & O. E.

Patent Pending GB 1011052.6
Specflue Limited

8 Curzon Rd, Chilton Industrial Estate, Sudbury, Suffolk. CO10 2XW
Tel. 0800 90 20 220. Fax. 0845 130 7555. sales@specflue.com
Registered in England & Wales No. 2716331

Kit includes 4 x enclosure bands, 2.4m mesh sections and fixing bolts/washers.

Mesh allows the flue to be inspected without having to remove enclosure.
