

Chimney Balloon

Product Features

- Eliminates chimney draughts
- Saves on heating bills
- Prevents debris & bird mess
- Reduces outside noise

Eliminates chimney draughts Easy to install and remove

A simple yet effective way of blocking chimneys when not in use. Prevents draughts and stops heat escaping through the chimney; a blocked chimney needs only half the amount of heat compared to a room with an open chimney. An ideal solution for chimneys that are not in every day use.

The special laminate of three plastics makes it air tight, tear resistant and long lasting. Its special shape allows ventilation in two corners, keeping the chimney dry. Chimney balloons are completely safe and if accidentally heated shrivel and deflate.

Easy to install

Simply position your chimney balloon just out of sight above the fireplace opening and inflate using your mouth inflation tube or an air bed pump.

If you have a large inglenook fireplace, you can stand inside and inflate the chimney balloon above your head. To reach higher, purchase a hand grip extension kit. To remove, simply open the tap on the hand grip and let the chimney balloon deflate.

Available in five sizes.

Fits almost any chimney/flue system
