

THERMAFLUE

ThermaFlue is a high-quality insulating sleeve for flexible flue liners. Each sleeve is hand manufactured and inspected to exacting standards. The sleeve is stitched with Aramid sewing thread, ideal for high stress applications requiring extreme strength and heat protection. Each length has an overlap collar with a D-G link system that ensures consistent thermal insulation. Adjustable hook and loop fasteners facilitate a taut fit around the flexible flue liner. With additional flame-retardant Velcro fastenings.

The inner wall of ThermaFlue comprises a durable and non-flammable needled glass fibre that provides excellent resistance and stability. The outer wall is a moisture repellent inflammable silicone coated material. **ThermaFlue is guaranteed for 10 years.**

ThermaFlue is manufactured in one metre sections and available in two widths. TH5-6 is suitable for 125mm and 150mm diameter liners and TH7-8 for 175mm and 200mm diameter

ThermaFlue has been tested to BS EN1856-2:2009 with a Designation T450 N1/P1/P2 D or W Vm (L****)O. In the case of a chimney fire like the liner it must be replaced. Please see fitting instructions for details. It is capable of withstanding higher temperatures but must be replaced, like the liner itself, after a chimney fire.

125mm to 155mm Diameter - 1 Metre Length
SAP Code: **TF1155**

180mm to 200mm Diameter - 1 Metre Length
SAP Code: **TF1200**

List Price: **£56.78**

List Price: **£70.53**
