

TT60S

TT60 RANGE

The TT60 range's minimalistic lines are in line with contemporary trends and are reminiscent of the design of our first stove – the TT1 – which focused on the simple essentials.

Design enthusiasts will appreciate that our design inspiration comes from Johan Otto von Spreckelsen's modern Grande Arche, while the wood-burning stoves adhere to the clean and elegant lines that Termatech has become well know for.

The receding lines in the cast-iron door lead the eye naturally towards the flames. This feature is particularly emphasised in the soapstone version, since the lines extend into the actual stone – a detail repeated in the discreet door handle's elegant wooden casing. The cast-iron door is easy to open using the handle in stainless steel and black-stained oak. The magnetic two-point closing mechanism guarantees operation without the wear caused by moving parts.

The handle is situated as standard at the base of the cast-iron door, but can be moved to the top if desired. The combustion chamber has a width of 38 cm and meets the requirements for all known European standards. With an efficiency of 83%, the TT60 matches the same high level as TermaTech's other models. As an further option, the handle in the TT60 range is offered in an exclusive oiled oak version.

TT60 RANGE

TT60

The TT60 range's entry model is characterised by simplicity and sharp lines. The cast-iron's door's raw finish, with its receding sides, naturally leads the eye to the flames playing in the combustion chamber.

The details are further underlined by the strong 5-mm steel sides and top plate. The stainless steel trim adds an extra dimension to the design, emphasising the stove's simple lines. A new interpretation of a design classic at an attractive price.

Energy efficiency class	A*

Operating range in kW	4 - 8
Efficiency rate %	83
Heats sqm	30 - 120

TT60

TT60S

TT60S

The elegant design is particularly apparent when the TT60 is clad with the beautiful, diamond-honed soapstone sides. In addition to their high end looks, they feature the heat-retaining benefits of the Brazilian soapstone.

Natural elements combined with stylish elegance.

TT60W

The TT60W is a wall-mounted wood-burning stove in the TT60 range. With its clean, minimalist design, it has been created for the classic modern home, where the focus is on simplicity and function.

Mounting the stove on the wall gives it a particularly simple and stylish look, making the TT60W stove the centrepiece of the room when in use, but also unobtrusive at other times.

One interesting detail is that the TT60W is also provided with four adjustable feet. This means it can also be

mounted on a concrete slab or integrated into a concrete or brick fireplace.

With a depth of just 37 cm, the TT60W has the appearance of a small stove, but even so, it has a 38-cm wide combustion chamber, making it very versatile in use.

As standard, the TT60W is supplied with a closed top plate, but it can easily be converted for a top outlet with a different, optional top plate. Other extras include an oiled oak handle and a fresh air nozzle with outlet either at the base or the rear.
