

Safer, healthier gas fires

exodraft

The chimney fans that ensure your family's safety

exodraft is the only system on the market which has an approved fail-safe function, ensuring that your family is not exposed to unnecessary risk when using an open gas fire. Our system can be used to ensure the safety of an existing fireplace or installing a new fireplace.

An **exodraft** chimney fan system gives your family the freedom to choose a gas fire based on your needs rather than the limitations imposed by the building's design and construction. The chimney fan can even be used without a chimney!

exodraft chimney fans can be placed on top of your chimney or ...

... the chimney fan can be placed on an external wall

A safe fireplace with built in freedom of choice

Enjoy the pleasure of an open fire – even if you don't have a chimney

Safety

– a secure failsafe system

The chimney fan's control system automatically shuts off the gas if there is insufficient updraught in the chimney, always ensuring that your gas fire only operates when the fumes can be removed. The **exodraft** system is the only approved system currently available.

No chimney required

The chimney fan system works equally when installed on a traditional chimney or attached to an outside wall – giving you the freedom to choose the gas fire that suits your needs.

Healthy indoor environment

Thanks to a continuous updraught created by the chimney fan system, all harmful gas fumes are removed to enhance a healthy indoor environment.

Solves all spillage problems

The chimney fan system creates optimal updraught in your chimney regardless of wind and weather conditions, thus eliminating all down draught into your living room.

Chimney fan systems – with or without a chimney

exodraft chimney fan systems consist of the chimney fan, gas controller and gas solenoid valve. The controller will vary depending on your requirements.

Chimney fan system with vertical extraction
– typically via a chimney

Chimney fan system with extraction via external wall
– where there is no chimney

The chimney fan is available in 3 versions – for vertical or horizontal discharge via a chimney or for discharge via an external wall. All versions are available in a wide range of sizes that matches all fire types.

There is a single chimney fan controller available that ensure fail-safe control of your fire. When switched on, a signal is sent to the chimney fan to create the optimal updraft in the chimney. Only when this is achieved will the control system allow gas into the gas fire enabling the gas fire to be lit. Any reduction in updraft will result in the gas supply being cut and the fire being switched off. This is the only system on the market that has attained a GASTEC approval in accordance with EN298.

Easy to install

Chimney mounted chimney fans are installed using location brackets.

Where there is no chimney, fans are attached directly to the wall. Note that the control system needs to be installed by a qualified installer.

Easy maintenance

The chimney fan can be opened allowing easy access for cleaning and sweeping. The chimney fan is equipped with a stainless steel safety mesh that covers the exhaust opening. This prevents accidental contact and provides protection from birds and other animals.

exodraft's extensive product range is based on more than 50 years of experience and knowledge in the field of combustion and chimney draft technology. Our products are known for high safety and quality and we are helping to set the standards and requirements for draft technology.

exodraft products are all fully documented in accordance with current national and international standards and are sold in more than 40 countries – for small domestic fireplaces in private homes to larger commercial and industrial boiler installations.

Solid fuel and wood-burning stoves and fireplaces

Decentralized multiple fireplaces connected to same chimney

Solid fuel and bio-fuel boilers (pellets etc.)

Gas fireplaces

Oil and gas boilers

Decentralized multiple heating appliances connected to same chimney
