

Moisture Meter

FIR421

Ensure that your firewood is fully seasoned. Then enjoy a fire with less smoke, reduced chimney deposits & lower environmental pollution.

Improved Efficiency:

Fuel quality is the single most important aspect of making a successful fire. To burn effectively the moisture content of firewood needs to be less than 20%, whether it be an open fire or in a stove.

Freshly felled timber has a moisture content of between 30% and 60%, depending on the type of wood.

The Valiant moisture meter can also be used in timber, floors and buildings in order to detect and measure moisture content.

- Easy to use and read, even in poor light
- Measure moisture content of wood fuels, structural timber and brickwork
- Measure temperature in °C or °F
- Low battery indicator
- Complete with protective storage bag
- Requires 2 x AAA batteries (not included)

Specifications:

Height 110mm
 Width..... 50mm
 Depth..... 20mm
 Weight..... 64g
 Carton dims..... 142 x 73 x 36mm
 Carton weight..... 130g

Feature:

An essential need is to be able to correctly interpret the Moisture Meter's display, with ease. This model not only has a backlight screen to illuminate the reading but the built-in colour change technology clearly indicates the moisture level of the firewood:
