FACTS ABOUT EXODRAFT FANS

FREEDOM OF DESIGN

Vertical and horizontal flue runs with multiple elbows.

BETTER COMBUSTION

Optimal draught to fireplace in all weather conditions.

INCREASED SAFETY

Constant monitoring of flow and automatic shutdown. Approved according to Gas Appliance Directive.

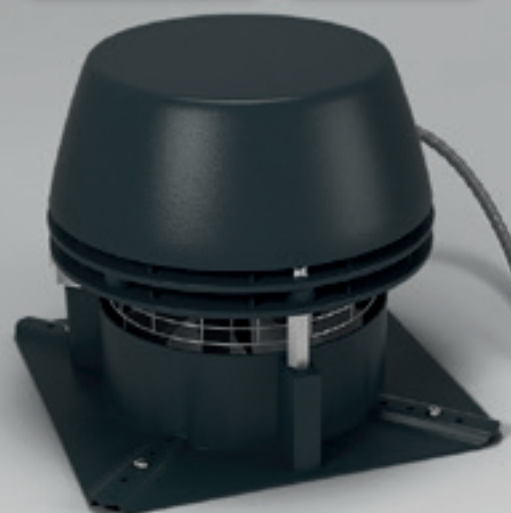

ATTRACTIVE DESIGN

All fans have a compact form factor and a sleek design. Pick your colour.

Maintenance-free

Easy to install

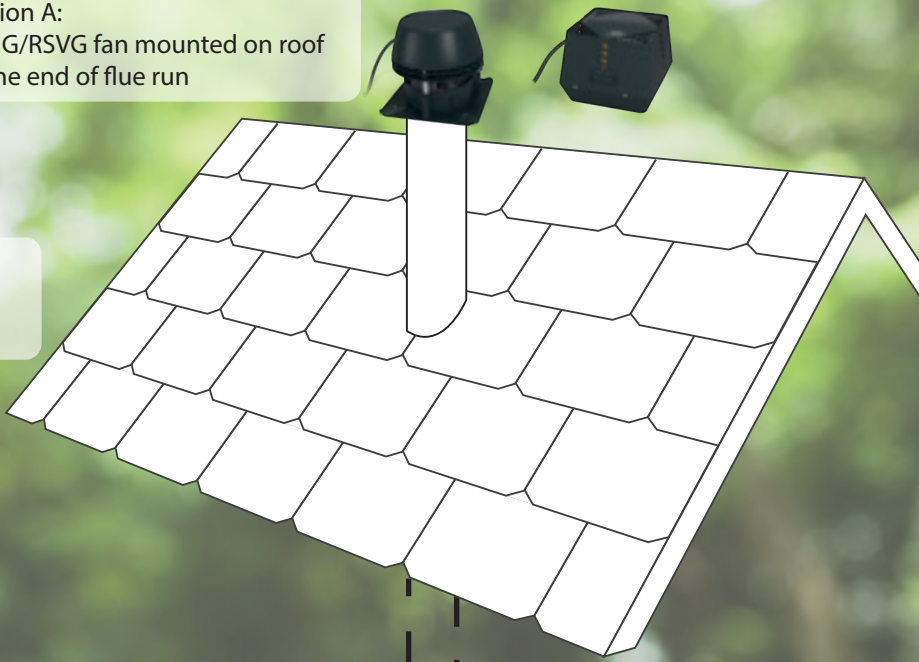

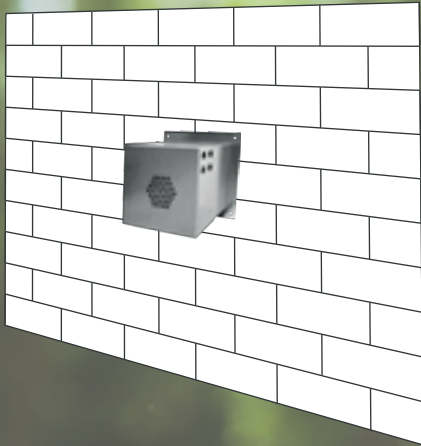

2 YEAR WARRANTY

Available in all RAL colours on request

Option A:
RSHG/RSVG fan mounted on roof
at the end of flue run

Option B:
RSG fan mounted on external
wall at the end of flue run

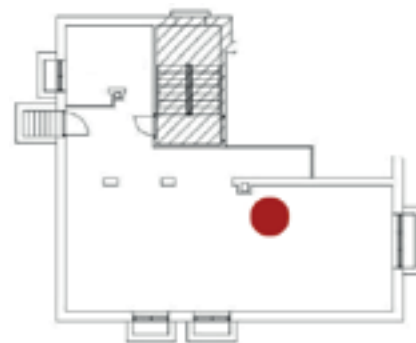

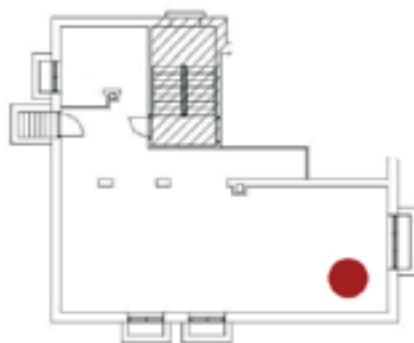

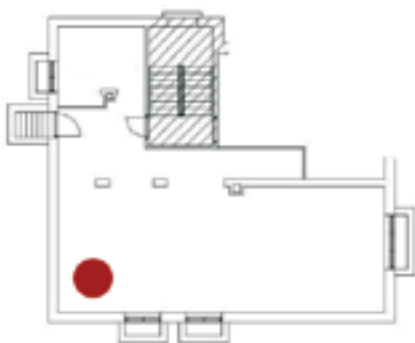

More options for fireplace placement

With the possibility of both vertical and horizontal flue runs with multiple bends, the placement of your fireplace is no longer limited by the location of your chimney.

 Gyrofocus Gas Fire

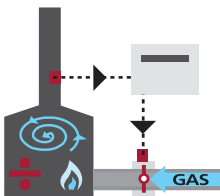

The chimney fan ensures your family's safety

Exodraft is the only system on the market which has an approved fail-safe function. The system is used to secure the safety of the new fireplace.

An **exodraft** chimney fan system gives you the freedom to choose a gas fireplace based on your needs rather than the limitations imposed by the building's design and construction.

A safe fireplace with built in freedom of choice

Enjoy the pleasure of an open fire – also without a traditional chimney

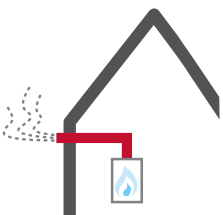

Safety – a secure failsafe system

The chimney fan's control system automatically shuts off the gas if there is insufficient updraught in the chimney, always ensuring that your gas fire operates correctly. The exodraft system is the only approved system currently available.

Solves all spillage problems

The chimney fan system creates optimal updraught in your chimney regardless of wind and weather conditions, thus eliminating all down draught into your living room.

No chimney required

The chimney fan system works equally when installed on a traditional chimney or attached to an outside wall – giving you the freedom to choose the gas fireplace that suits your needs.

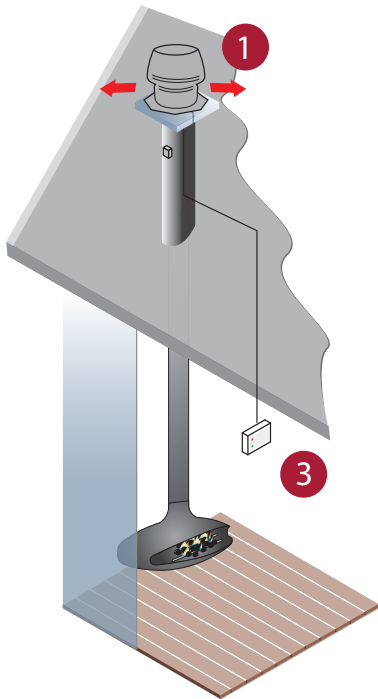

Healthy indoor environment

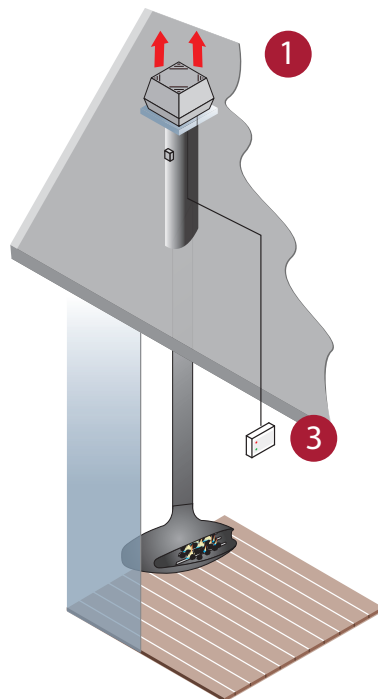

Thanks to a continuous updraught created by the chimney fan system all harmful gas fumes are removed to enhance a healthy indoor environment.

Chimney fan systems – with or without a chimney

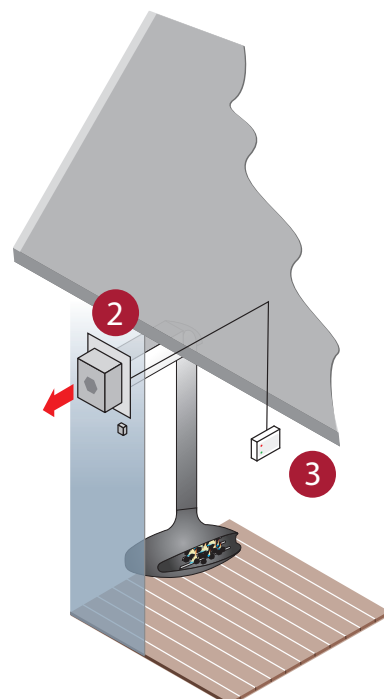

exodraft chimney fan systems consist of the chimney fan, a gas controller and a gas solenoid valve.

Chimney fan system with horizontal extraction via a steel chimney

Chimney fan system with vertical extraction via a steel chimney

Chimney fan system with extraction via an external wall where there is no chimney

The chimney fan is available in 3 versions – for vertical or horizontal discharge via a steel chimney or for discharge through an external wall. All versions are available in a wide range of sizes that matches all types of fireplaces.

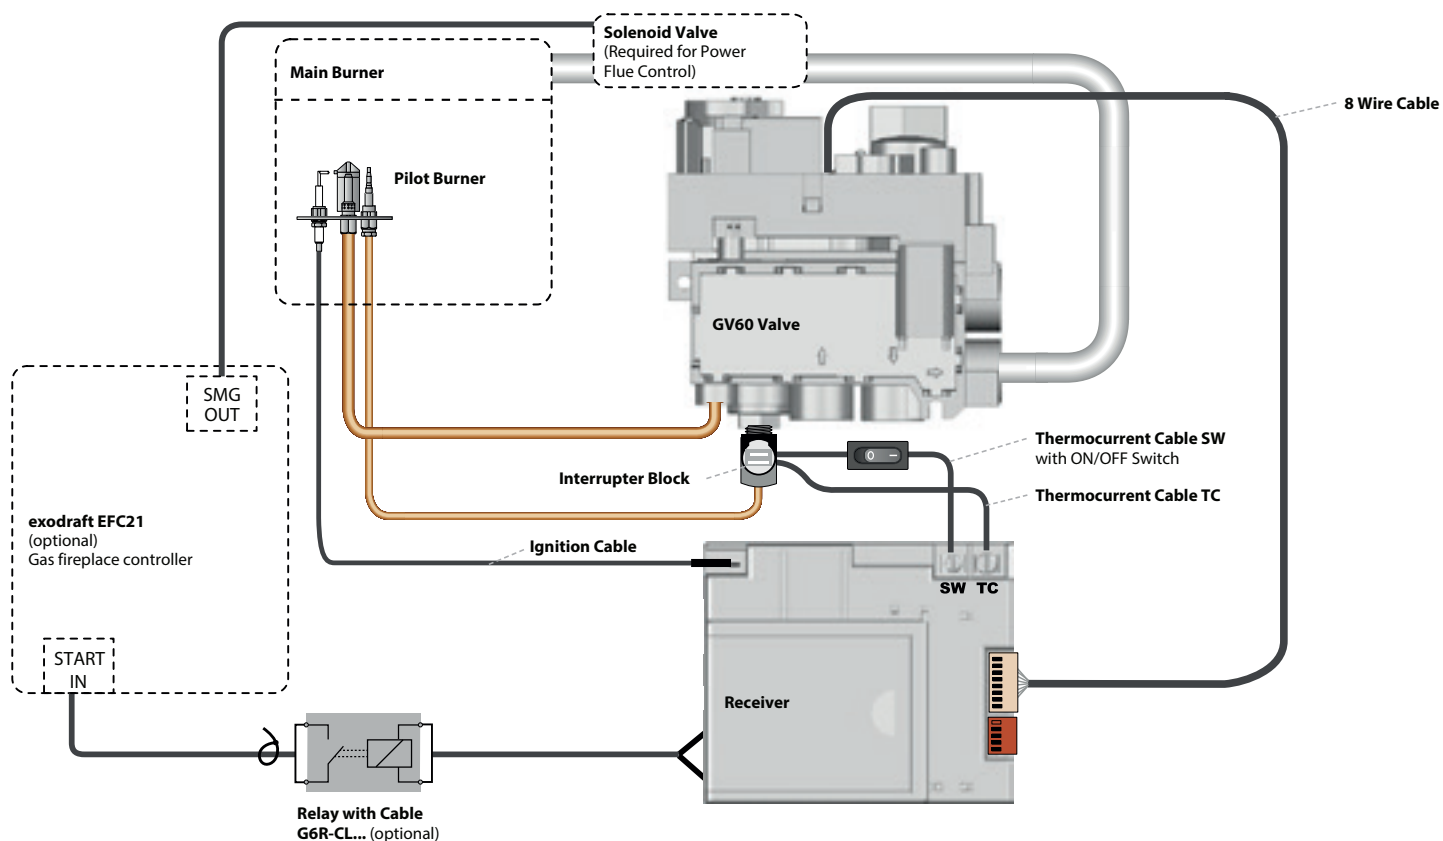

3
EFC21

The chimney fan controller ensures fail-safe control of your fire. When switched on a signal is sent to the chimney fan to create the optimal updraft in the chimney. When this is achieved the control system will allow gas into the gas fire enabling the gas fire to lit. Any reduction in the updraft will result in the gas supply being cut and the fireplace will switch off. This is the only system on the market that have attained the GASTEC approval in accordance with EN298.

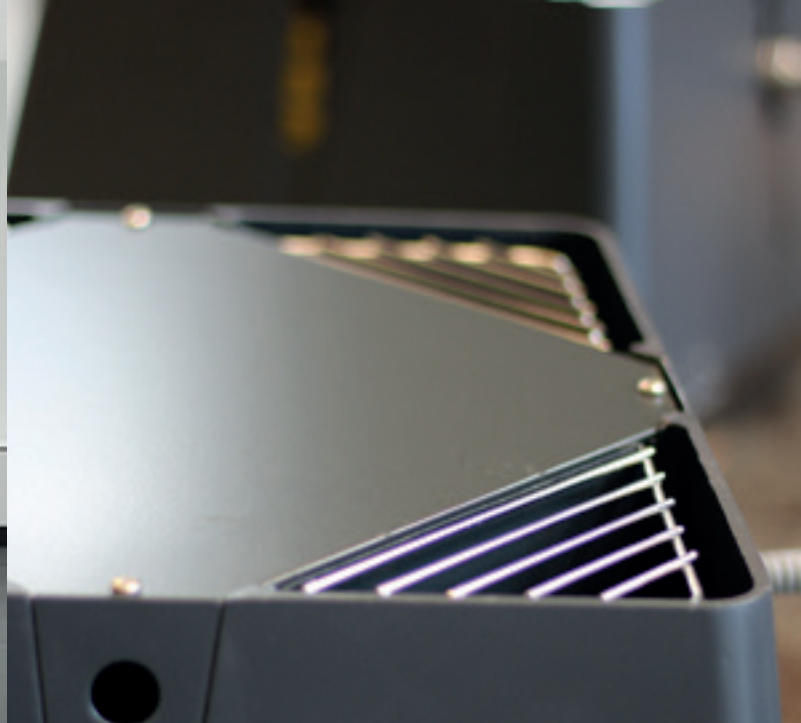

Connection to gas controller

Function:

Using the remote to start the fireplace a radio signal is sent to the receiver, making the fan start and create the correct chimney draught. This is achieved within a few seconds and the gas fireplace will automatically ignite.

**For further advice and calculation of your system,
